KEY ROLES AND POSITION SUMMARY

Revit-CAD Designer / Architect performs work on basic defined segments of a project, under continuous interaction with Sr. Architects & Project Manager. Contributes to general preparation of design phase, construction documents and models. Exhibits understanding of basic building materials, details, and construction techniques, along with general project design, building codes & philosophy relating to assigned project. Performs basic documentation, working drawings and presentation work including full coordination with other disciplines.

KEY RESPONSIBILITIES

- Involves from pre-design, schematic design, design development, construction documents for final drawing package development.
- Overseeing all the architectural aspects of the development of the design, production of the construction documents (plans) and specifications.
- Coordinates the client's need possibly, designer views and technical staff.
- Direct coordination between the Project Manager, Sr. Project Architect and other disciplines related to a specific project.
- Responsible for the design management of a project, assisted by a team of Architects, Draftsmen and Technical Staff in concert with a Project Manager.
- Responsible in range from client relations to zoning and building code management and regulations, material specifications, RFI's, RFQ's, RFP's and maintaining quality control by checking and revising shop drawings.
