## ABOUT ME

A decisive, enthralled & professional architect who wants to not only make a real difference to society but to also change lives and create buildings which lift the spirits of those who live in them. I have experience of being involved in the design and construction of diverse projects such as residential, commercial, interior, renovation, landscape, urban ecology, infrastructure development & its maintenance.

ARCHITECTURE

Classical elevation is a style of architectural design that emphasizes symmetry, balance, and proportion. It is characterized by clean lines, geometric shapes, and classical architectural elements such as columns, pilasters, and pediments
